

# BEST WI-FI ON THE PLANET

# Smart Wi-Fi

---

Our smart Wi-Fi is affordable, secure and hassle free. An intelligent wireless solution that is flexible and responsive, providing a 3x increase in optimum performance and coverage compared with other enterprise competitors.

- The beam-forming technology transmits the signal directly to the user allowing you to roam seamlessly, without signal loss
- It automatically detects and avoids interference giving unrivalled connectivity and performance
- Extensive range of dynamic security features
- Fully managed and self-healing network providing zero IT support and reducing costs
- With dual band it can give network speeds up to 600Mbps making it ultra-fast
- Support for 802.11/b/g/n means it is compatible with both old and new client devices

# Indoor Wireless

---

Our indoor wireless solutions provide a reliable network infrastructure that can be configured to meet the requirements of your business or organisation offering increased flexibility and mobility for your users.

- Up to 16 networks from one wireless infrastructure, allowing you to restrict or grant access on sensitive network areas to individual users or groups
- Ability to easily create guest and visitor accounts
- Create public hotspots for generating extra revenue with automated payment system at no extra cost
- Easily extend the coverage of your network as and when required by adding extra Access Points quickly and easily
- Ideal for listed buildings, old buildings with thick walls and other difficult to get a signal areas
- Increased signal range means fewer AP's required there by reducing costs further

# Outdoor Wireless

---

Our outdoor wireless solutions can securely extend your current network to external buildings or outdoor locations up to 6 miles with point to point devices making it more cost-effective in the long term than annual leased lines from a telecoms provider.

- Public and private networks for outdoor events or areas can be set up and taken down in a short space of time
- It can provide a low cost and dependable alternative to expensive cabling
- Where cabling cannot be installed it provides a viable alternative solution
- External Access Points have a coverage of up to 300 metres
- Power over Ethernet (POE) features can provide power to support external devices such as CCTV
- Asset management and real time location systems extensively supported

# Solvings Wireless

---

Solvings is an independent UK company specialising in providing IT Infrastructure Services, Support and Project Consultancy, nationally throughout all sectors of industry, with special expertise within the Defence and Government sector.

Our approach in supporting you, your projects and needs is simple – we are flexible, professional and we get the job done – we ensure that we have targets that we can all aim for and understand, as well as exceed of course. We have on-going governance and project reviews, to ensure things are going well, and that we “deliver the goods” for you.

With the explosion of Wi-Fi enabled devices like Smart-Phones, iPads, and video with everything and who knows what else in the future, all our engineers have embarked on extensive training in that area, and we can safely assure you that our advice and installations will give you the network you should expect.

Maintenance and support follows on so that you can have peace of mind once the network is up and running. All types of upgrades and customisations are possible too, and our designers will be only too pleased to discuss your future needs.

Contact us to arrange a no obligation demonstration of the equipment on your premises
